Installation and release status

A working beta, not an officially registered or commercially certified release.

INSTALL

Use the six static TTF files for broad desktop compatibility.

Use the variable TTF instead in apps that support variable fonts.

Install one format at a time to avoid duplicate family entries.

WEB

Use the included WOFF2 files and CSS example in the installation guide.

The weight axis runs from 300 to 800. Open [preview.html](#) to test it.

The local preview sends no text or data to any service.

TECHNICAL CHECKS

All 20 font files were reopened and checked for printable ASCII coverage.

Six static weights and eleven variable weights were shaped in HarfBuzz.

The tests check substitutions and missing glyphs, not linguistic certification.

STILL REQUIRED

Native Hindi and Arabic review; broader kerning and interpolation proofing;

screen hinting and real-device compatibility review; trademark review;

and final commercial terms before paid distribution.
